DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 5/11/05 has been entered.

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Art Unit: 2834

4. Claims 1 and 4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kulig (3,995,167) in view of Nakai et al. (4,155,826).

Regarding claims 1 and 4, Kulig shows a vacuuming motor (30), for being attached to a peripheral edge of a motor attaching hole of a vacuum chamber, comprising:

- A reduction gear (36, 38) main body attached to an end portion on a load side (32) of a motor main body, including an attaching flange (of 24) fixed to the motor attaching hole (formed by 74) to interpose an O-ring (78) therebetween; and
- A vacuum seal (60, 62) fixed to the attaching flange (of 24) contacting slidably with an output shaft (40) of a reduction gear, for partitioning an inner space of the reduction gear main body and the motor main body and an inner space of the vacuum chamber (80).
- Wherein the motor main body (30) and the reduction gear main body (36, 38) are arranged in an atmosphere outside of the vacuum chamber (80).

Kulig does not show the vacuum seal made of resin.

Nakai et al. shows the vacuum seal (16) made of resin for the purpose of separating two environments.

Since Kulig and Nakai et al. are all from the same field of endeavor; the purpose disclosed by one inventor would have been recognized in the pertinent art of the others.

Application/Control Number: 10/660,652

Art Unit: 2834

It would have been obvious at the time the invention was made to a person having ordinary skill in the art to make the vacuum seal of resin as taught by Nakai et al. for the purpose discussed above.

5. Claims 2 and 5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kulig in view of Nakai et al. and further in view of Harris et al. (6,483,336).

Regarding claims 2 and 5, the motor of Kulig modified by Nakai et al. includes all of the limitations of the claimed invention except for a middle sucking port for vacuuming air at an interval between the vacuum seals.

Harris et al. shows a middle sucking port for vacuuming air at an interval between the vacuum seals (Figure 3) for the purpose of creating a vacuum environment.

Since Kulig, Nakai et al. and Harris et al. are all from the same field of endeavor; the purpose disclosed by one inventor would have been recognized in the pertinent art of the others.

It would have been obvious at the time the invention was made to a person having ordinary skill in the art to include a middle sucking port for vacuuming air at an interval between the vacuum seals as taught by Harris et al. for the purpose discussed above.

6. Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Kulig in view of Harris et al. (6,483,336).

Regarding claim 3, Kulig shows all of the limitations of the claimed invention except for a middle sucking port for vacuuming air at an interval between the vacuum seals.

Application/Control Number: 10/660,652 Page 5

Art Unit: 2834

Harris et al. shows a middle sucking port for vacuuming air at an interval between the vacuum seals (Figure 3) for the purpose of creating a vacuum environment.

Since Kulig and Harris et al. are all from the same field of endeavor; the purpose disclosed by one inventor would have been recognized in the pertinent art of the others.

It would have been obvious at the time the invention was made to a person having ordinary skill in the art to include a middle sucking port for vacuuming air at an interval between the vacuum seals as taught by Harris et al. for the purposes discussed above.

Information on How to Contact USPTO

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dang D Le whose telephone number is (571) 272-2027. The examiner can normally be reached on Monday through Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Darren Schuberg can be reached on (571) 272-2044. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Application/Control Number: 10/660,652
